

EMSINA

Emergency Management Spatial Information Australia

2020

End of EMSINA Project Report

End of Project Summary for:

GIS Applications Project

Project Lead Name:

Aaron Cashion

End of Project Report: Ongoing

Summary:

- The GIS Applications resource on the EMSINA website is operational and members can upload details of any GIS applications that they have developed, for example, an ArcGIS Field Map project for collecting flood observation data, an ArcGIS WebApp for managing Interstate high, medium and low risk geographic travel regions for COVID or an ArcGIS Operational Dashboard showing COVID 'lock down' regions within a jurisdiction.
- Sharing of such developments across the EMSINA community and its reach into the broader EM sector will reduce duplication of effort and aligns with EMSINA's mission statement.

Project Issues or Comments:

- Editing of existing GIS Apps is yet to be implemented.
- Encourage members to conduct an audit of GIS Applications developed over the past 12 months and upload to site.

Follow-up Work in 2021:

- Implement editing capability for updating existing GIS App details.

Project Acknowledgements:

- Kane Orr has been instrumental in making this work through the EMSINA website, so thank you Kane.
- Thanks also to those that contributed through uploading their GIS Applications.
