

EMSINA

Emergency Management Spatial Information Australia

2020

End of EMSINA Project Report

End of Project Summary for:

Major Incidents Review

Project Lead Name:

Teena Speirs

End of Project Report:

Summary:

- Following on from the 19-20 Black Summer bushfires and a global pandemic where EMSINA members were providing comprehensive geospatial support, it's important to reflect on and share what went well and identify those areas the need improvement.
- A range of online meetings were established with EMSINA members from every state and territory to collect the lessons learned information.
- Story map was the technology used to deliver the information shared from the meetings.
- Final product link: [EMSINA lessons learned for 2019-2020 \(arcgis.com\)](https://www.emsina.org/arcgis/storymaps/2019-2020-lessons-learned)

Project Issues or Comments:

- No issues (except COVID and no travel)
- I would say face to face all in one room is much easier (and a less time consuming way) to capture all the relevant information to develop the story map content.

Follow-up Work in 2021:

- Nothing to follow up.
- I am of the view this should be a yearly piece of work that EMSINA members do complete.

Project Acknowledgements:

- Thanks to all EMSINA members for their contribution and involvement. (and shout out to the committee for their note taking and technical support 😊)
